

Animated Card & Modal

DevFest 2020

Description

In the current days of web, almost all websites and webapps use some kind of a **CARD ELEMENT** in their UI, this type of element is either used to group out related information, display content, organize element, and many more usages, it is so prevalent that most UI libraries include it by default. Since this element is so widely used and seen by users, most of them become used to it to the point where they no longer appreciate it. You! ,as the great frontend developer as you are, are challenged in making a **creative card element** that will capt users interest again.

To pass the Challenge:

1. Create a Creative Animated Card Element.
2. The Element should have some piece of textual content like: header, body, ...
3. The Element should have some piece of Imagery like: Avatar, Icon, illustration,....
4. The Element should open to a **modal** when clicked on it.
5. The transition from the card to the modal should be animated.
6. The modal should have more information than the card could hold.
7. Pay close attention to the creativity of your work it will be a deciding factor in the evaluation.

Technical Requirements:

1. You can only use HTML,CSS,and JavaScript.
2. The use of CSS frameworks like Bootstrap is prohibited.
3. The use of Frontend frameworks like : React, Vue, Angular is prohibited.
4. You can use 3rd party libraries for things other than **ui components,animation, and styling** like : state, date formatting ...
