

Hack Chrome Dino

DevFest 2020

Description

We have all experienced Internet loss at some point in our web surfing experience, luckily enough we have our buddy “Dino” the dinosaur from Chrome to keep us company, some of us have reached a very high score (get it ?), jokes aside today we are messing with our buddy Dino, we are **HACKING INTO HIS LOGIC**.

To pass the Challenge:

1. Give dino powers so that he does not lose.

Further Hacking:

1. Modify the logic that is executed when keys are pressed.
2. Modify the logic of obstacle apparitions.
3. Modify how score is computed: for example make it so that each time you hit an obstacle the current score becomes negative.
4. Mess around with NightMode.
5. Explore other possibilities

Hints

- You can access Dino Game while online by typing “chrome://dino” in the url.

-
- Use DevTools for the challenge and check the global object for available classes.
